# Your Weaknesses

## JavaScript Fundamentals: **Average**

You need to start practicing with basic using testing and work your way up to understand and get hand on with integration and end to end tests. You need to understand patterns to structure tests, concepts like mocks and spies and how to effectively measure test coverage.

You probably have a hard time debugging your own code. Invest in tooling, understanding the language fundamentals and learning how to leverage your IDE to make progress here.

## Frontend Mastery: **Average**

You can deliver frontend code, but you struggle with non trivial issues. You need to invest more time in both the frontend fundamentals(browser API, advanced JS) and in advanced topics like Web Performance.

You will also need to consolidate your knowledge of the "big picture". You should focus on getting a holistic view of the whole software lifecycle applied to the frontend, including deployment, monitoring and scalability.

## Fullstack Thinking: **Average**

You need to invest time into really understand how HTTP works and how you can leverage it both on the client and frontend side of things.

You should also pay special attention to request headers and Web Engineering mechanisms like CORS and Content Negotiation. Building on that, you should continue learning how authentication and authorization work in HTTP and more advanced topics like caching and scalability.

## Software Lifecycle: **Average**

You probably need assistance deploying your code from more senior members of the time. You might also have a hard time debugging issues in your CI/CD pipeline.

You sometimes struggle to understand the big picture and deployment best practices. You should invest time getting comfortable with tools like Docker and different CI/CD paradigms(deployment styles, availability, etc).

## Algorithms & Data Structures: **Average**

You should definitely invest more in learning the core pieces of software, algorithms and data structures as they will help you build your own mental modal and teach you how to approach problems differently.

We recommend starting with the simplest, most basic units like arrays and hash maps and building your way up to recursion, bigO notation and the rest. Developing your algorithmic thinking will strengthen all the other mastery dimensions and you can apply this knowledge to any language and framework in the future.

## Software Architecture: **Average**

At this level you probably have a lot of challenges understanding the big picture and how it affects your everyday work and impact. Remember: and architect is an excellent coder.

Make sure work on all the other dimensions, and you should notice an overall increase also here. Afterwards you will need to dive deeper into architecture styles and tradeoffs analysis to developer your perspective.

# Student Results

## Kirsten Burton – Senior Frontend Engineer, NY, USA

Kirsten's challenge came from her experience as a self-taught engineer and the relatively small company she was working at.

She became the "Jane of all trades", jumping from feature development to bug fixes to setting up infrastructure topics.

The biggest breakthrough in the case of Kirsten and the first thing we did was finding out her technical gaps.

With our help, she moved into a Senior position, **increase her salary by more than 40%** with a better stack and the ability to work remotely. She is now on her way to **Tech Lead**!

## Ranjit Saimi – Full-Stack Engineer – London, UK

Ex-lawyer and Bootcamp graduate, Ranjit has been coding for around 3 years when he got in touch with us. Throughout his journey, he jumped from startup to startup, which meant limited exposure to codebases at scale.

We helped him expand his understanding of software development, best practices and big-picture understanding at scale (Cloud Infrastructure, Software Architecture).

In a matter of weeks he landed an offer that completely blew his expectations, with a **100% salary increase**, touching six figures in the London market (keep in mind he is only in his 3rd year of writing code!). He is now motivated to keep growing and working towards the next step.

## Goksen Gorgulu – Frontend Developer – Amsterdam

Goksen accumulated experience in different tech stacks but knew none of them too deep. She wanted more responsibility and a level that reflected her skills.

The first thing we did was to **focus** all her efforts on what she liked most, the React framework, and deepen her skills on the full-stack (Backend, APIs, HTTP and the Software Lifecycle).

Goksen successfully transitioned into a more **Senior** position, working with her favorite stack and **an almost 70% salary increase**. She is now working towards an *Engineering Manager* position.

# Student Results

## Alex Zahar – JavaScript Engineer, Munich DE

Alex had been coding for almost 3 years already when he realized he got stuck. For years he has been **stagnating in his technical skills** as well as his compensation.

As a self taught developer, his **fundamentals were weak**. Before working with us he was even considering going back to university and do a master's degree. Together we build a **roadmap** for him to go from "jack of all trades" to a really strong JavaScript developer.

As a result he not only got the mid/senior level, but more than **doubled his salary** by successfully switching to a much bigger international tech company.

## Fahed Arshad – Full-Stack Developer – Edinburgh, UK

As a **self-taught developer** Fahed has been working with the JavaScript stack for a while and he was hungry for something more, but every time he tried, **Impostor Syndrome** would hold him back.

After working with us, Fahed almost **doubled his salary** within just a few weeks, and not only that but he made the transition from "Developer" to "Engineer" that he's been looking for.

He went from guessing his way out through things to being able to deliver with **full confidence, end-to-end** like a **true Senior Developer**.

## Scott Voyles – Frontend Engineer, Bad Schwalbach DE

As an ex-Bootcamper, Scott has been struggling for years to understand technologies beyond frameworks and libraries.

What's more, at his job he has been moved from project to project which kept him from really gaining a **deep understanding** of the JavaScript stack. For him, it was all about **the fundamentals**.

After working with us, he successfully transitioned into the **mid/senior ranks** and almost doubled his salary with **an increase of 58%**. He now keeps increasing his skills aiming for a Software Architect position.

## Dragos Nedelcu – Senior Developer & Co-Founder

Dragos started as a self-taught software developer and spent the first years building custom software for small businesses in Madrid.

He moved to Berlin, the heart of the European software industry. Being new in the city, he first explored the startup ecosystem. There he progressed quickly, **getting promoted to Senior Developer in record time** and joining a top technology company, Mister Spex.

He became known because of his activity on **LinkedIn** where his posts have been read by hundreds of thousands of software developers. Now he is one of **the most sought-after experts** in the industry on the topics of software development, upskilling and self-development.

## Bogdan Nedelcu – Principal Engineer & Co-Founder

Bogdan is a **Principal Software Engineer**, with expertise in turning around IT companies and leading large software projects in the start-up, finance, and construction industries in Europe.

After taking the engineering culture at Klarna to the next level he moved on to Enpal GmbH to **lead several engineering teams**.

Bogdan coached and mentored 20+ students in software development as a Coding Instructor at the ReDI School of Digital Integration in Berlin.

As a seasoned **tech leader** he brings with him years of professional experience building **highly scalable software systems**.

## The best investment of my time and money in my Software Engineering career

I'm extremely happy with the results of the course(from filling the knowledge gaps, boosting the confidence in interviews to mindset shift) and I wish I had joined earlier!

Although I have Computer Science degree, years of part time working on outdated code bases had really negative impact on my confidence.

Dragos and Bogdan are amazing coaches, from technical and non-technical point of view and the content of the course is exactly what the current market is looking for!

Just after a matter of weeks I have managed to land a job I could only wish for before doing the course.

Exceptionally grateful and would highly recommend joining this course to anyone who is feeling they could do more(you definitely can joining this course).

### Very effective program!

Dragos and Bogdan helped me to understand my current weaknesses from the very beginning. To overcome them, they provided me with valuable online resources and support in Q&A calls and DMs.

Besides, I learned much more than just programming: interviewing, CV, and LinkedIn optimization.

After 4-5 weeks with them and having completed just half of the program, I got the offer of my current job, and I am very happy here :)

I would recommend them to anyone who feels stuck in their careers as software developers!

**Dragos & Bogdan are experts in their...**

Dragos & Bogdan are experts in their field, their program is robust and comprehensive, focusing on best practices and first principles which are pretty much universal throughout software engineering. Their tips and tricks have enhanced my skillset, and also, helped me get a 44% increase in salary. I would definitely recommend their services!

Jan 17, 2023

**This senior developer course changed my life..**

This course / resource has given me the confidence to call myself a senior developer. Just looking through the questions and answers of other senior devs and knowing that you are as good as them is all I needed to push me to go for a better position. It also stopped me looking up to other developers which removed my imposter syndrome. Really supportive team with quick answers to your questions and the content is great, you can apply it to all languages and technologies. If you are looking to become a senior then this is the course for you. i got a 50% increase in pay within 6 months.

**Date of experience:** January 17, 2023

### The only programme where only RESULTS, shout out LOUD!!

I was struck in a functional role, and initially I felt that scaling and levelling up is just a paid course away. I invested heavily in 100+hrs of courses. Over time I started repelling from them because they are impractical to finish. Before every interviews I ended up watching youtube tutorials. This kind of strategy is fatal, because cracking an interview is not like cracking a sudoku. One has to perform and over kill after achieving a job, which is not practical after free content boosters.

Even after so much diligence I was still shallow in my overall approach, and to be honest I did not even know what is missing in my prep.

After getting coached by Bogdan and Dragos, I developed 3 traits:

Right Mindset, Right Attitude and Right Approach!!

And this is what every Senior portfolio individual is missing today!

Now I not only have full steer over my current job but super confident to bang future interviews as well.

I go all hearts to thank both for support they extended!!
